Installation Notes

Installation

Snapping a terminal block onto DIN-rail (to the left or to the right).

Removing a terminal block from the assembly (to the left or to the right).

Conductor termination

For the optimal clamping force:

• Bend conductor
• Cut conductor to length (conductor end must be straight)
• Strip conductor

Always observe the on-unit printed strip length guide!
Conductor termination – step 1:
Rotate the T-wrench counter-clockwise to the stop . Next, push in the orange locking tab. The clamp is locked open for hands-free wiring.
Conductor termination – step 2:
Insert a stripped conductor into the clamping unit until it hits the backstop. Hold in this position.

Conductor termination – step 3:
A short counter-clockwise rotation releases the tab. When unlocked, the T-wrench rotates clockwise, securely clamping the conductor.

Commoning
Commoning with an adjacent jumper: insert the jumper above the conductor entry hole – prior to conductor termination. The nominal cross-section remains unchanged.
Removing jumper via operating tool.

Cover

Protective warning marker may indicate: Notice: Power is still on even after switching off the main switch!
Yellow, detachable finger guards provide touch-proof safety by shielding jumper contact slots and/or unused conductor entries.
Power tap

Easily and consistently tap directly into the power supply. Insert the unwired tap before opening the clamping unit.
Security

Risk of Injury!
Do not insert fingers in the conductor entry!
Testing

Testing via touch-proof 4 mm Ø test plugs (not available from WAGO, but offered by industry suppliers such as, Multi-Contact Deutschland GmbH).
Testing
Voltage measurements can be performed, e.g., using a 2-pole voltage tester (Item No. 206-707).

Marking

WMB markers or self-adhesive, printable marking strips can be accommodated on 35, 50 and 95 mm² high-current terminal blocks.

Marker carrier (Item No. 285-442) for marking strips (Item No. 2009-110) or 2 WMB markers for 285-13x, 285-15x and 285-19x Terminal Blocks
